

ABSTRACT

A novel receptor-type protein tyrosine
5 phosphatase (RPTP) protein or glycoprotein and the DNA
coding therefor is expressed in a wide variety of
mammalian tissues. Included in this family of
proteins are human RPTP α , human RPTP β and human RPTP γ .
The RPTP protein or glycoprotein may be produced by
10 recombinant means. Antibodies to the proteins,
methods for measuring the quantity of the proteins,
methods for screening compounds, such as drugs, which
can bind to the proteins and inhibit or stimulate
their activity, are provided.
